Hyderabad, Telangana, India

About Me

AI & Data Science undergraduate with hands-on experience in Machine Learning, Computer Vision, NLP, Generative AI, and Intelligent Systems. Built AI-powered applications using Python, PyTorch, Hugging Face, Flask REST APIs, and transformer-based models. Passionate about designing production-ready AI solutions, LLM applications, and scalable software systems that solve real-world engineering and enterprise challenges.

Education

Amrita Vishwa Vidyapeetham — Coimbatore, India
B.Tech – Artificial Intelligence and Data Science ***(CGPA: 8.29 / 10)*** — *2023 – Present*

FIITJEE Limited — Hyderabad, India
Class XII ***(85.2%)*** — *2022*

FIITJEE World School — Hyderabad, India
Class X ***(9.8 / 10)*** — *2020*

Technical Skills

Programming: Python, C++ (C++14/17), SQL, MATLAB, Scala
AI Engineering: Machine Learning, Deep Learning, NLP, Generative AI, LLM Applications, Intelligent Systems
ML & Frameworks: PyTorch, TensorFlow, Hugging Face, TensorRT, Reinforcement Learning
Computer Vision: OpenCV, YOLO Architectures (v8, v8n, v11n), Real-time Object Detection
Web & APIs: Flask REST API, Docker, REST APIs
Tools: Git, GitHub, Linux, Apache Spark
Edge Hardware: NVIDIA Jetson Orin Nano, Raspberry Pi

Projects

Resume Screening Application | *Python, PyTorch, Hugging Face, Flask REST API, Docker, Tableau*

- Built an AI-powered resume screening platform using RoBERTa and Hugging Face Transformers to compare resumes against job descriptions and generate semantic match scores.
- Developed an NLP pipeline for resume parsing and skill extraction using the ESCO taxonomy, enabling intelligent candidate-job matching.
- Implemented transformer-based semantic similarity and automated resume ranking through a Flask REST API, demonstrating an end-to-end AI engineering workflow.

Eye Gesture Wheelchair Base | *OpenCV, Raspberry Pi, Flask REST API*

- Built an eye-gesture controlled wheelchair prototype for quadriplegic assistance using OpenCV and Raspberry Pi, enabling real-time gaze-based navigation.
- Designed a Flask REST API for communication between the vision module and embedded hardware, supporting real-time sensor processing.
- **Published at IEEE SISCON 2025**: "Eye Gesture Controlled Wheelchair for Quadriplegic Assistance" (DOI: 10.1109/SISCON66686.2025.11408976).

HomeNav: Autonomous Delivery Robot | *Raspberry Pi, Python, Flask REST API*

- Designed an autonomous indoor delivery robot featuring map-based navigation using BFS path planning.
- Developed a Flask REST API supporting map uploads, real-time robot monitoring, and remote control, demonstrating end-to-end hardware and software integration.

Child Monitoring Robot | *TensorFlow Lite, OpenCV, Django, Raspberry Pi*

- Built an AI-powered child safety monitoring system using TensorFlow Lite and OpenCV for real-time human and cry detection on Raspberry Pi.
- Integrated automated email and SMS alert notifications, enabling intelligent remote safety monitoring.

Certifications

Deloitte Australia – Data Analytics Simulation (View Certificate)
Tata Group – Data Analytics Simulation (Forage) (View Certificate)

Additional Information

Activities: Co-Head – Anokha Tech Fair 2026, Volunteer – Anokha Tech Fair 2024, Bhaava Drama Club
Soft Skills: Technical Communication, Team Collaboration, Problem Solving
Interests: AAA story-driven video games, motorcycle travel, Acting, Meditation (Heartfulness practitioner)
Languages: English (Professional), Telugu (Native), Hindi (Professional), German (Beginner)
